ACCESS TO TECHNOLOGIES (ATT)

Our objective

To reduce financial and technical barriers to the introduction of new and existing vaccines and immunization-related technologies in the immunization programmes of the world.

[New documents](#)
[Contact us](#)

ATT provides technical advice and support to UN Agencies and member states in the areas of [vaccine quality](#), [demand](#), [immunization financing](#), [cold chain and logistics](#), and [supply](#).

As more than one billion doses of EPI vaccines are purchased and distributed each year, the continued success of national immunization programmes depends on a reliable supply of safe and effective vaccines at affordable prices to countries.

What we do

- ⇒ ensure availability of appropriate [supply sources](#), whether from local production, direct [procurement](#) or agency procurement
- ⇒ monitor the [quality of vaccines](#) and [injection equipment proposed for UN agencies](#)
- ⇒ develop and promote sustainable [immunization financing](#) mechanisms
- ⇒ develop strategies for introduction and use of [new immunization technologies](#)
- ⇒ provide technical advice and training to countries on [vaccine management](#)
- ⇒ ensure the capacity to oversee and regulate these products by strengthening [national regulatory authorities](#) (including [Global Training Network](#)) and national supervision.
- ⇒ Coordinate networks and disseminate information:
 - [DCVMN](#)
 - [TechNet21](#)
 - [Vaccine Manufacturers' Corner](#)
